

# bitpusher

## DevOps for applications

BitPusher fills the gap between software and high-quality online services.

### Honest and realistic

We'll be blunt about what outcomes are achievable at what cost and on what schedule — as well as which work is and isn't a good fit for us.

### Full lifecycle

We work with both new applications and mature ones, providing services ranging from architecture to implementation to ongoing management.

### Business aware

BitPusher makes sure to understand the nature of your application and what determines how effectively it delivers your desired outcomes.

Contact BitPusher to take your application and cloud infrastructure to the next level.
